## Homework Assignment 1 using JFLAP

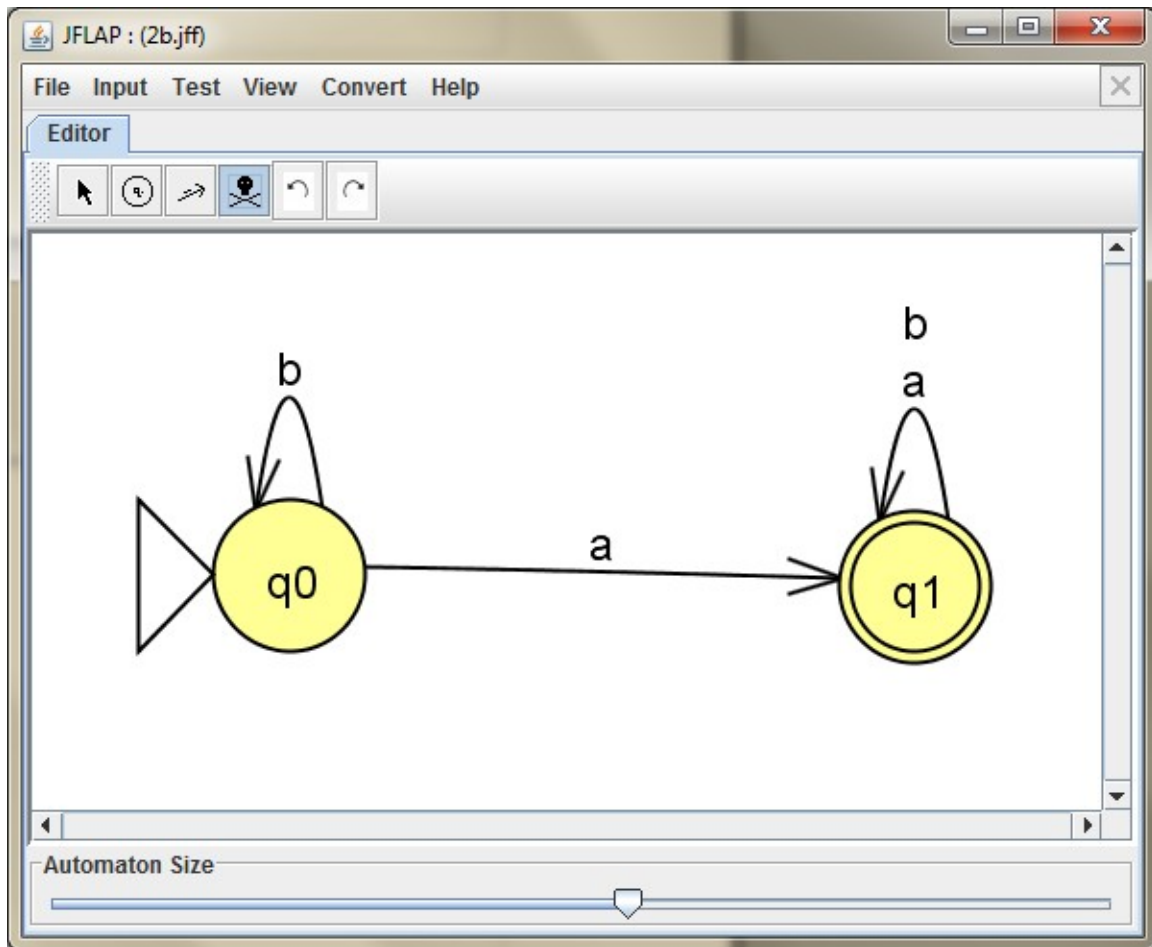

1. which strings (0001, 01001, 0000110) are accepted by the dfa in figure 2.1
- 0001 = Accept  
01001 = Accept  
0000110 = Reject

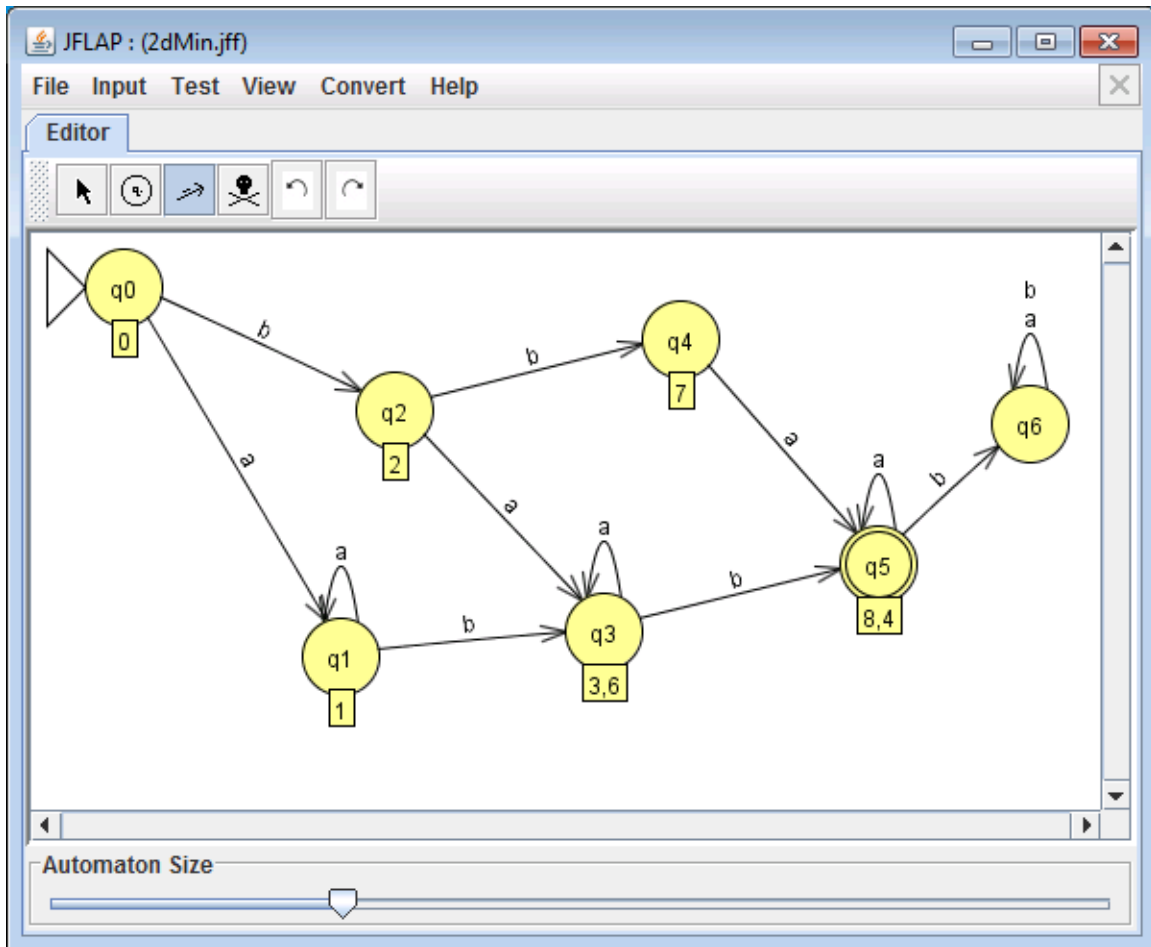

- 2(a)  $L = \{ \text{all strings with exactly one a} \}$

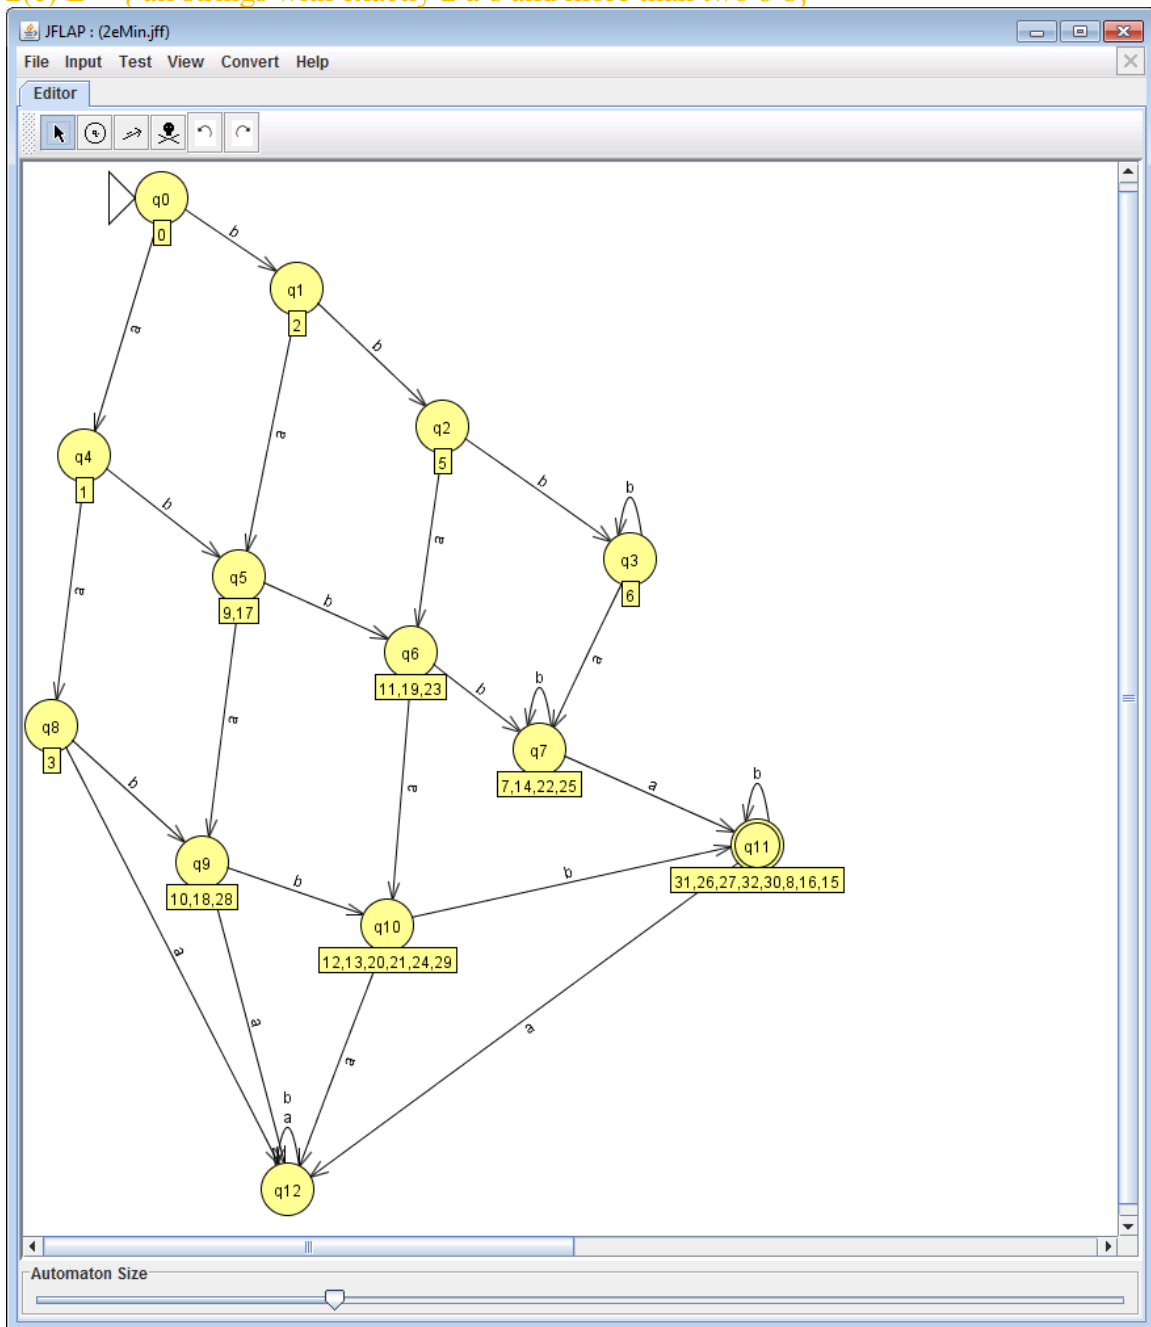

2(b)  $L = \{ \text{all strings with at least one } a \}$

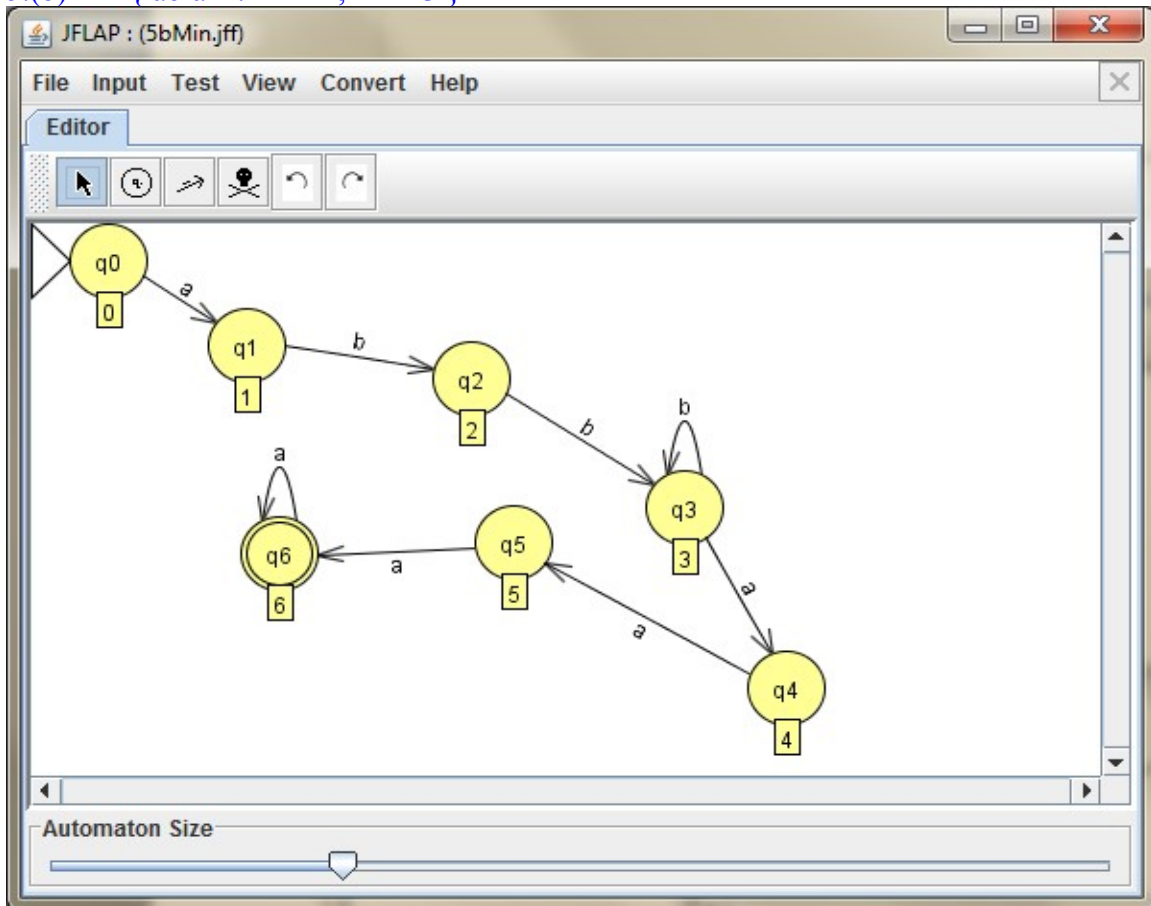

2(d)  $L = \{ \text{all strings with at least one a and exactly two b's} \}$

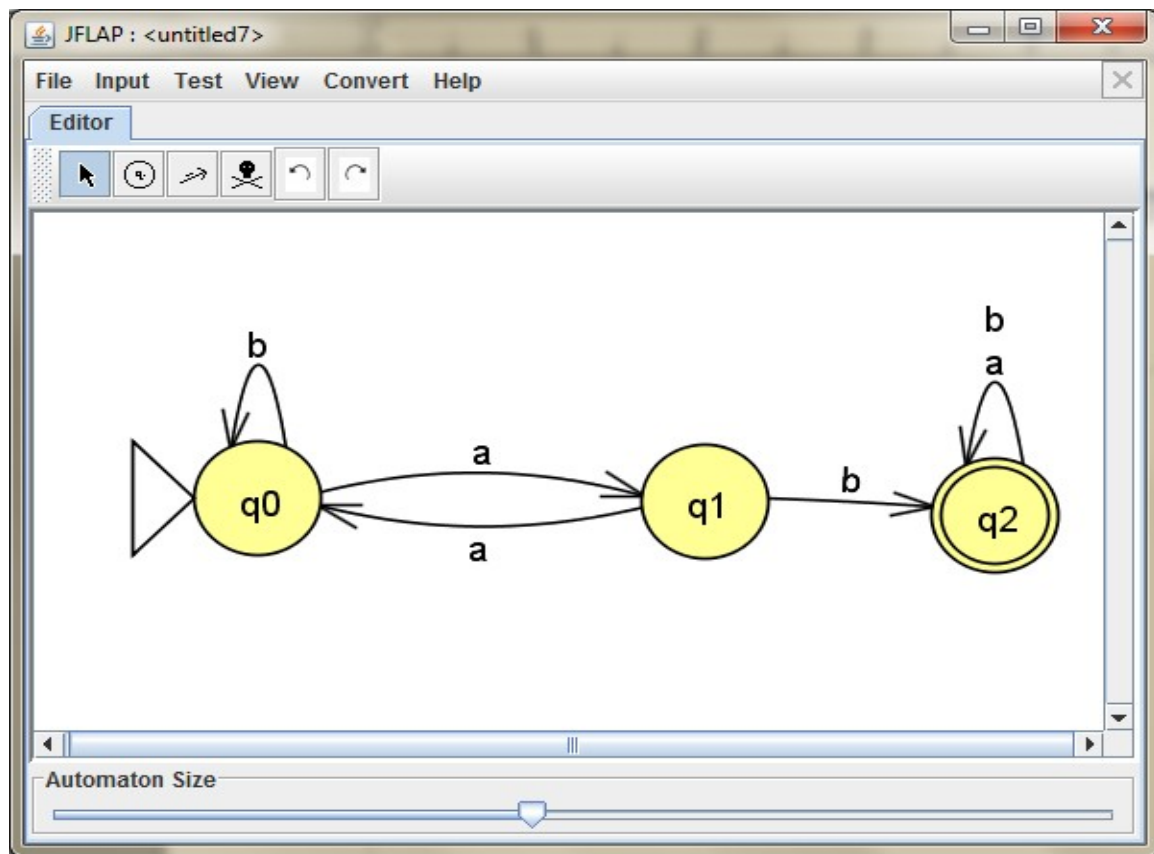

2(e)  $L = \{ \text{all strings with exactly 2 a's and more than two b's} \}$

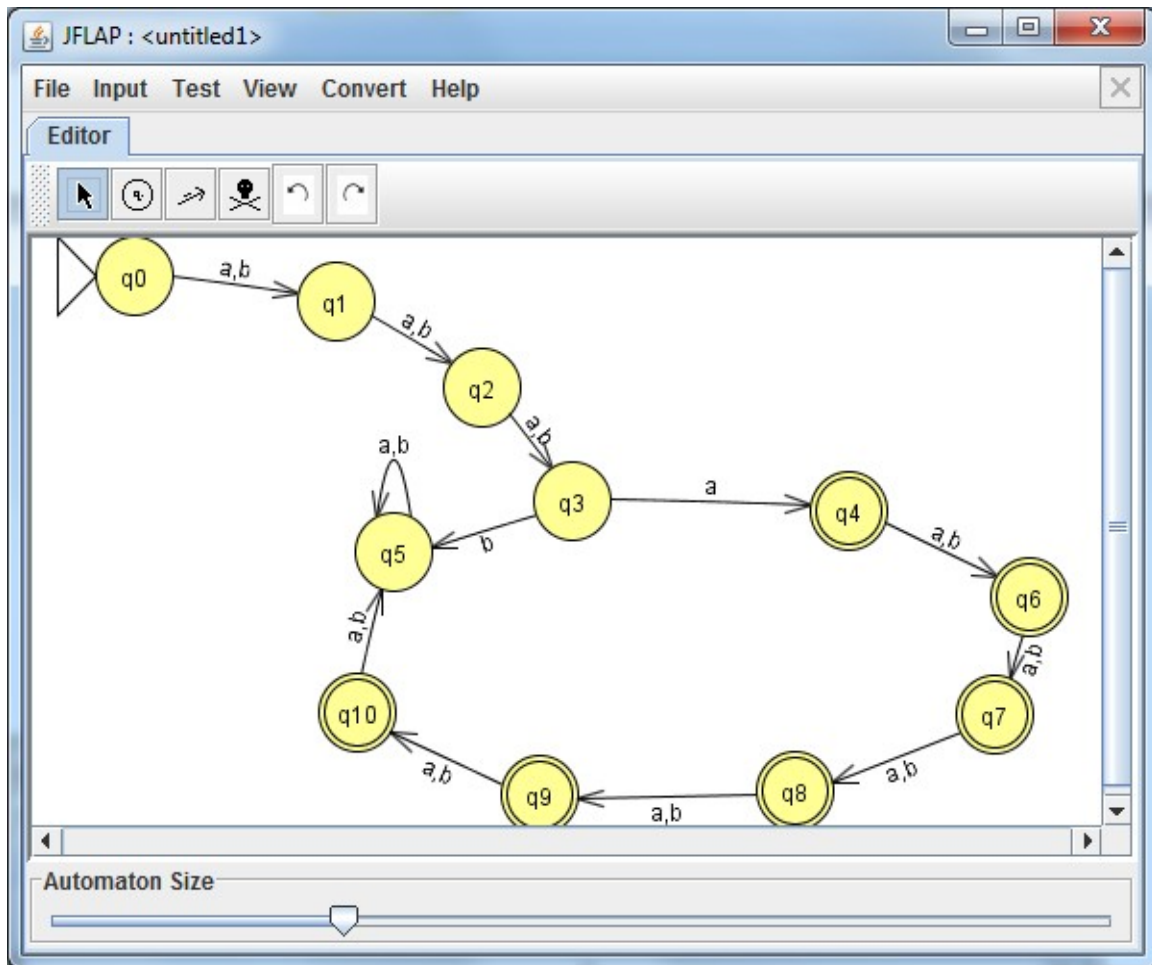

5.(b)  $L = \{ ab^n a^m : n \geq 2, m \geq 3 \}$

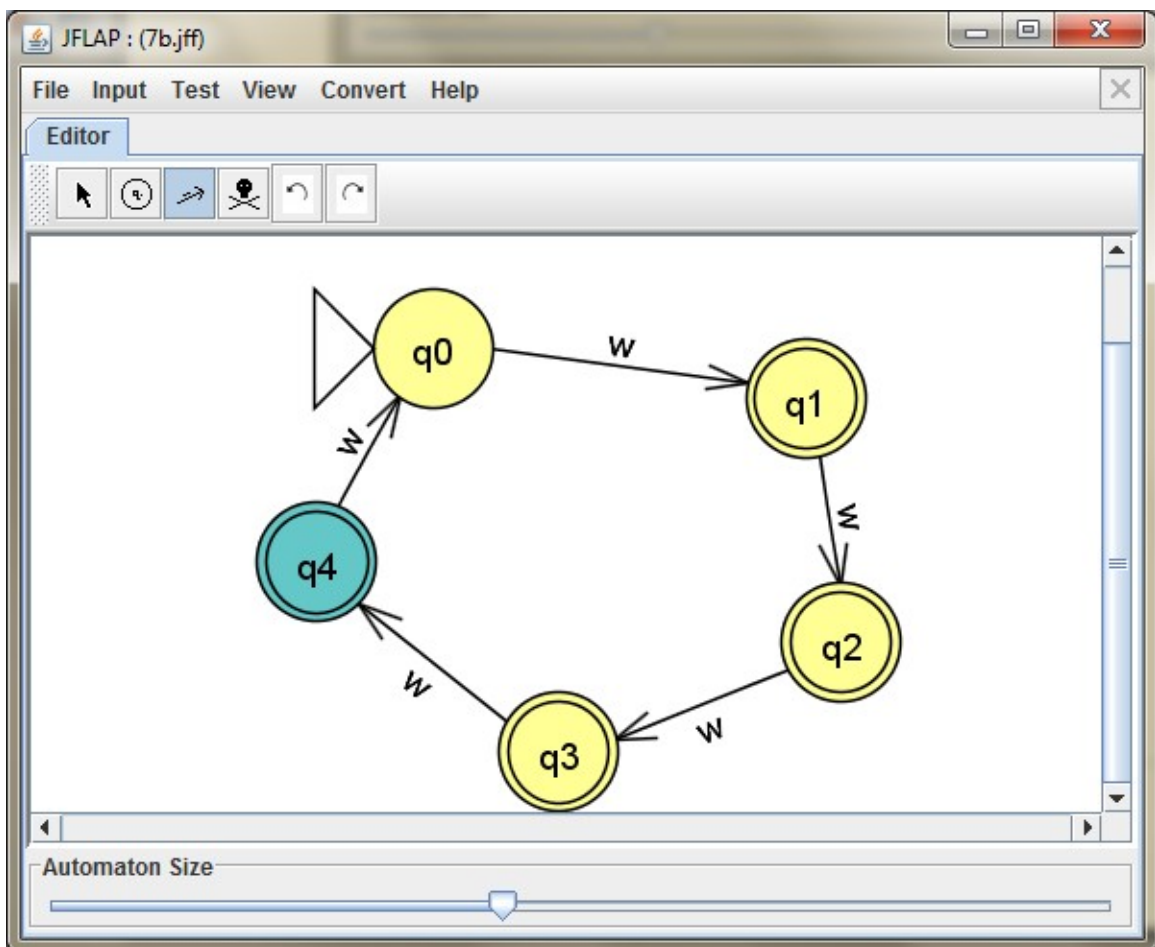

5.c)  $L = \{ w_1 ab w_2 : w_1 \in \{a,b\}^*, w_2 \in \{a,b\}^* \}$

6. With  $\Sigma = \{a,b\}$ , give a dfa for  $L = \{w_1 a w_2 : |w_1| = 3, |w_2| \leq 5\}$

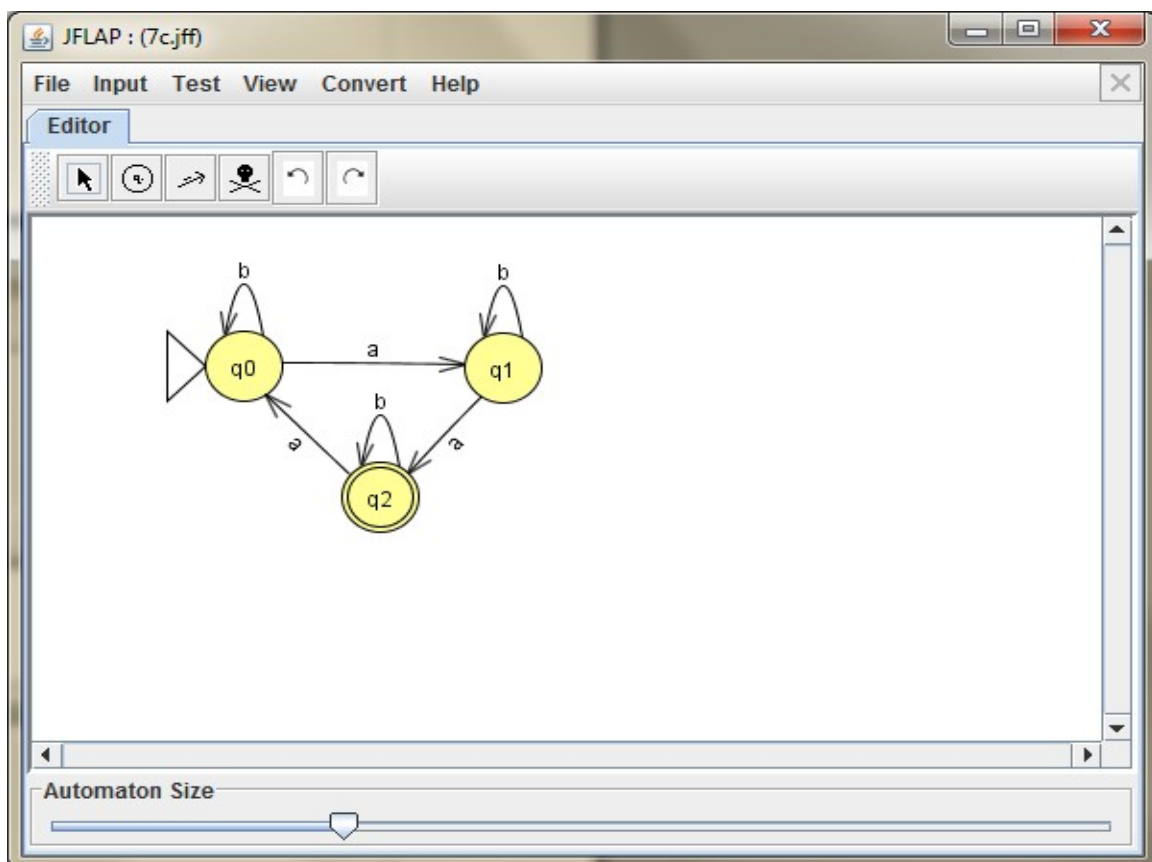

7. (b)  $L = \{ w : |w| \bmod 5 \neq 0 \}$

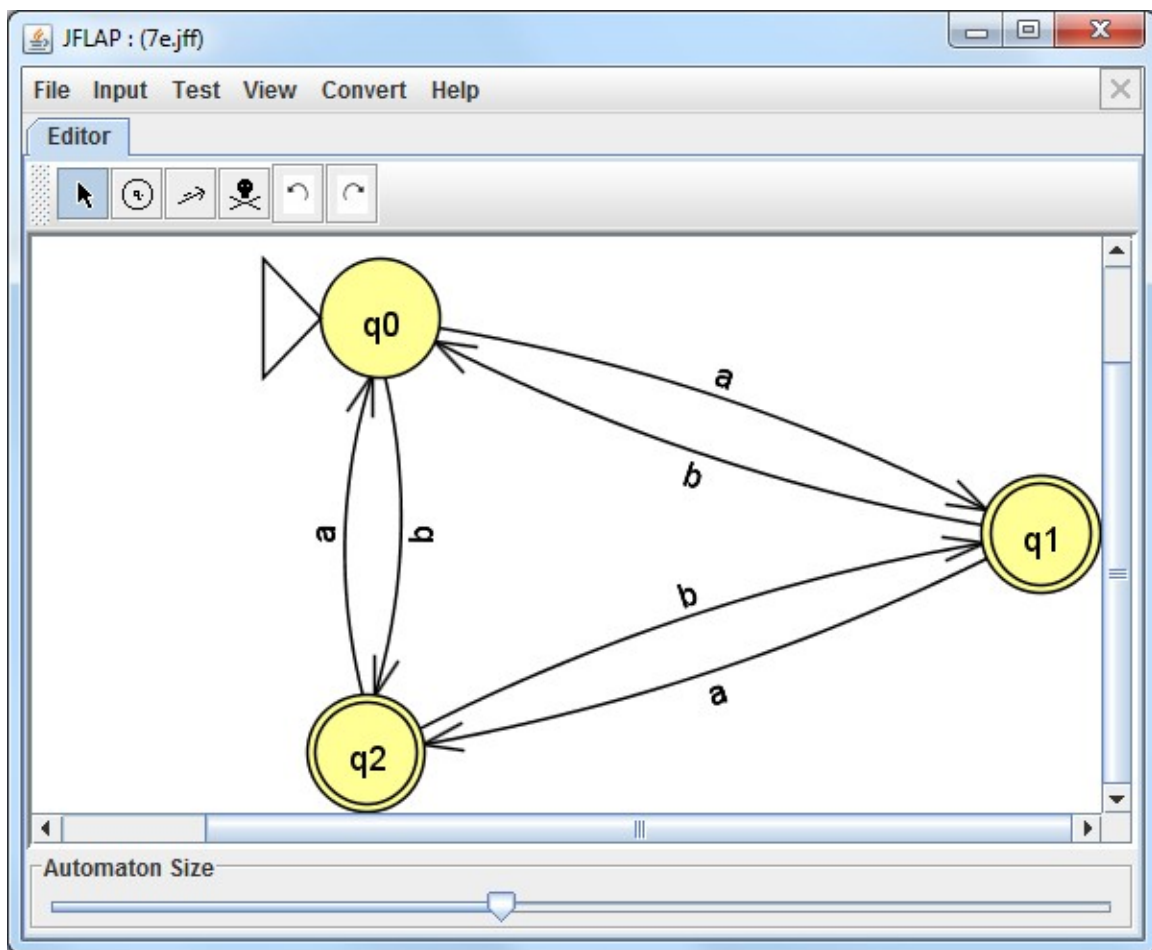

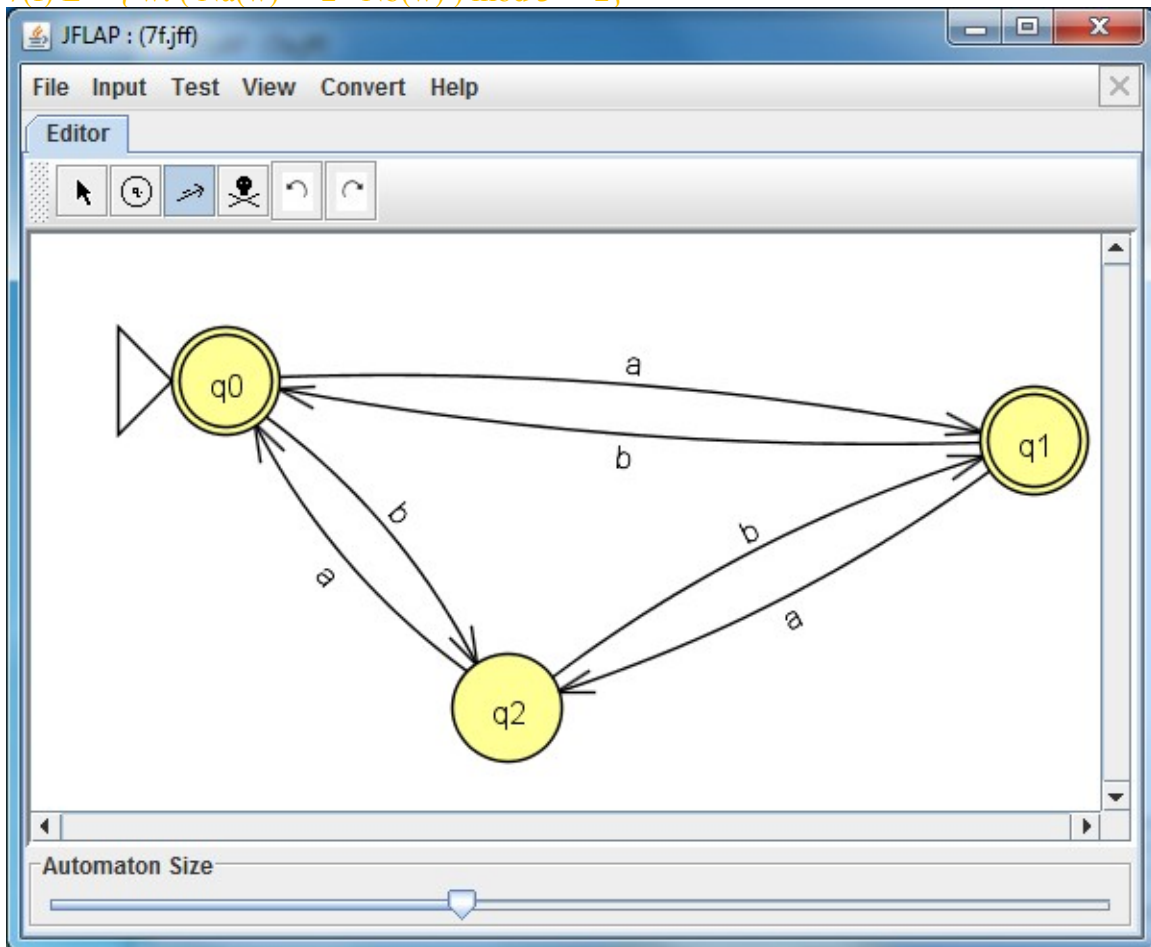

7.c)  $L = \{ w : Na(w) \bmod 3 > 1 \}$

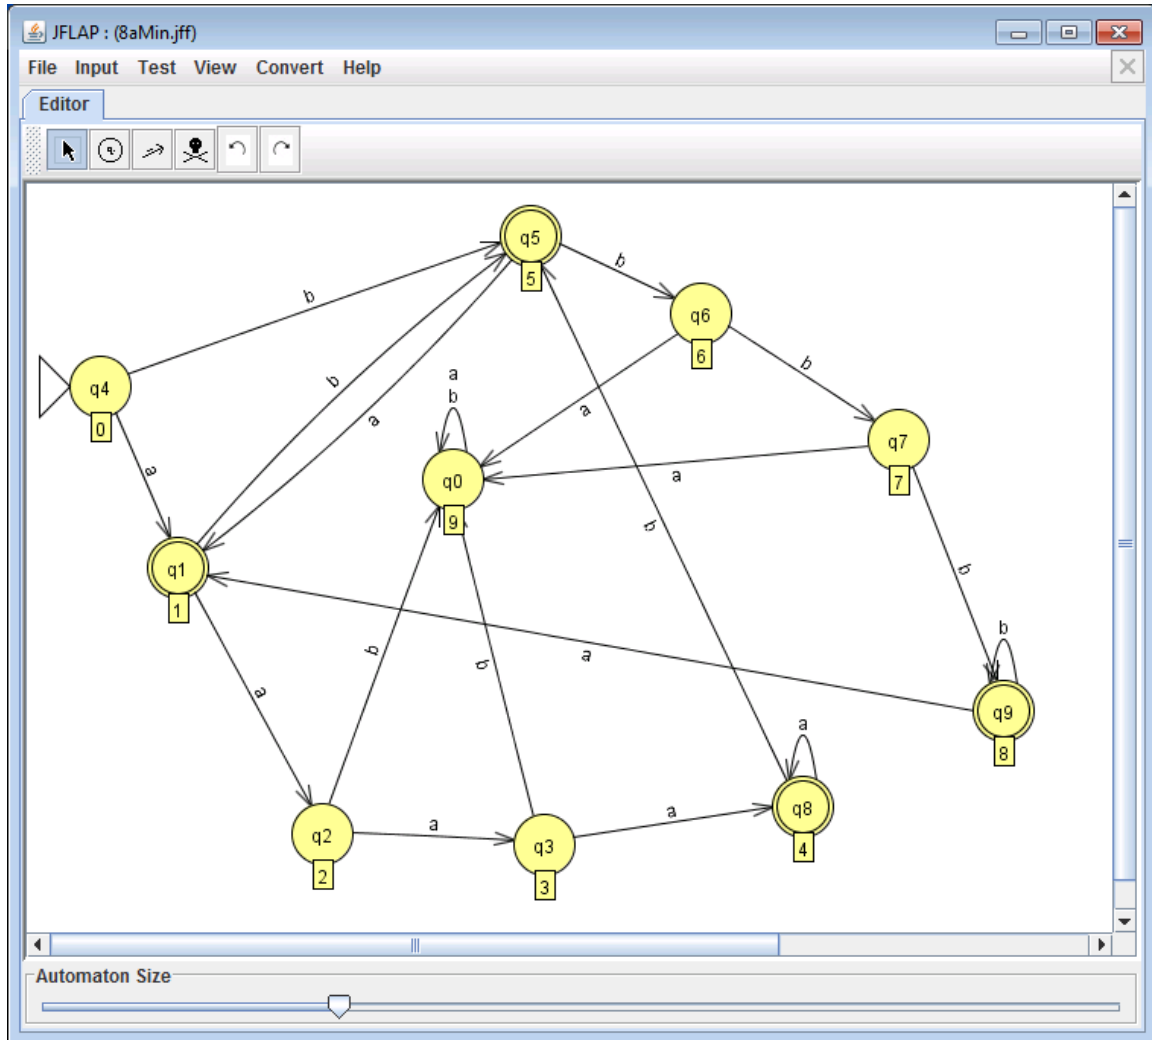

7(e)  $L = \{ w : (N_a(w) - N_b(w)) \bmod 3 > 0 \}$

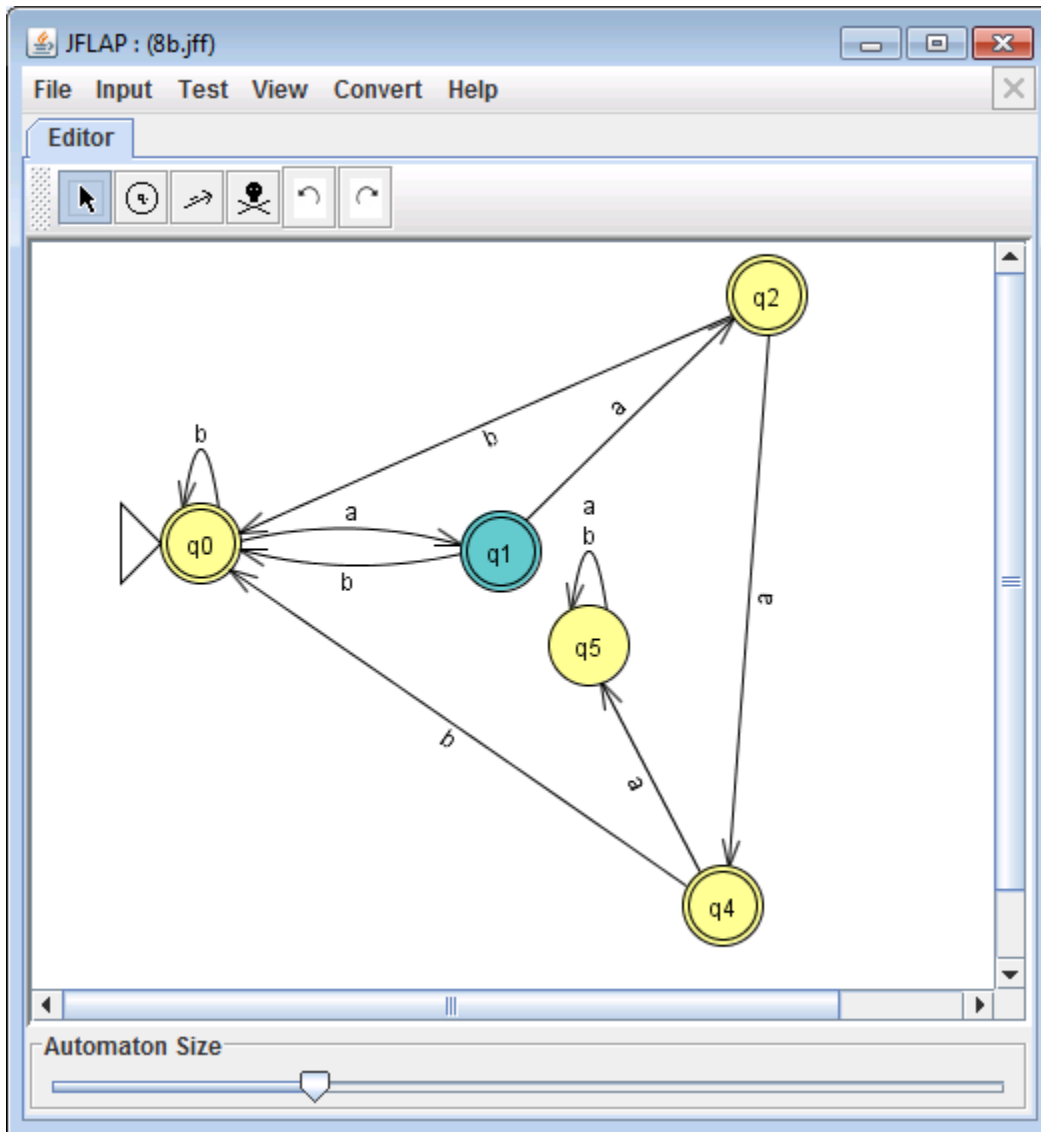

7(f)  $L = \{ w : (Na(w) + 2 * Nb(w)) \bmod 3 < 2 \}$

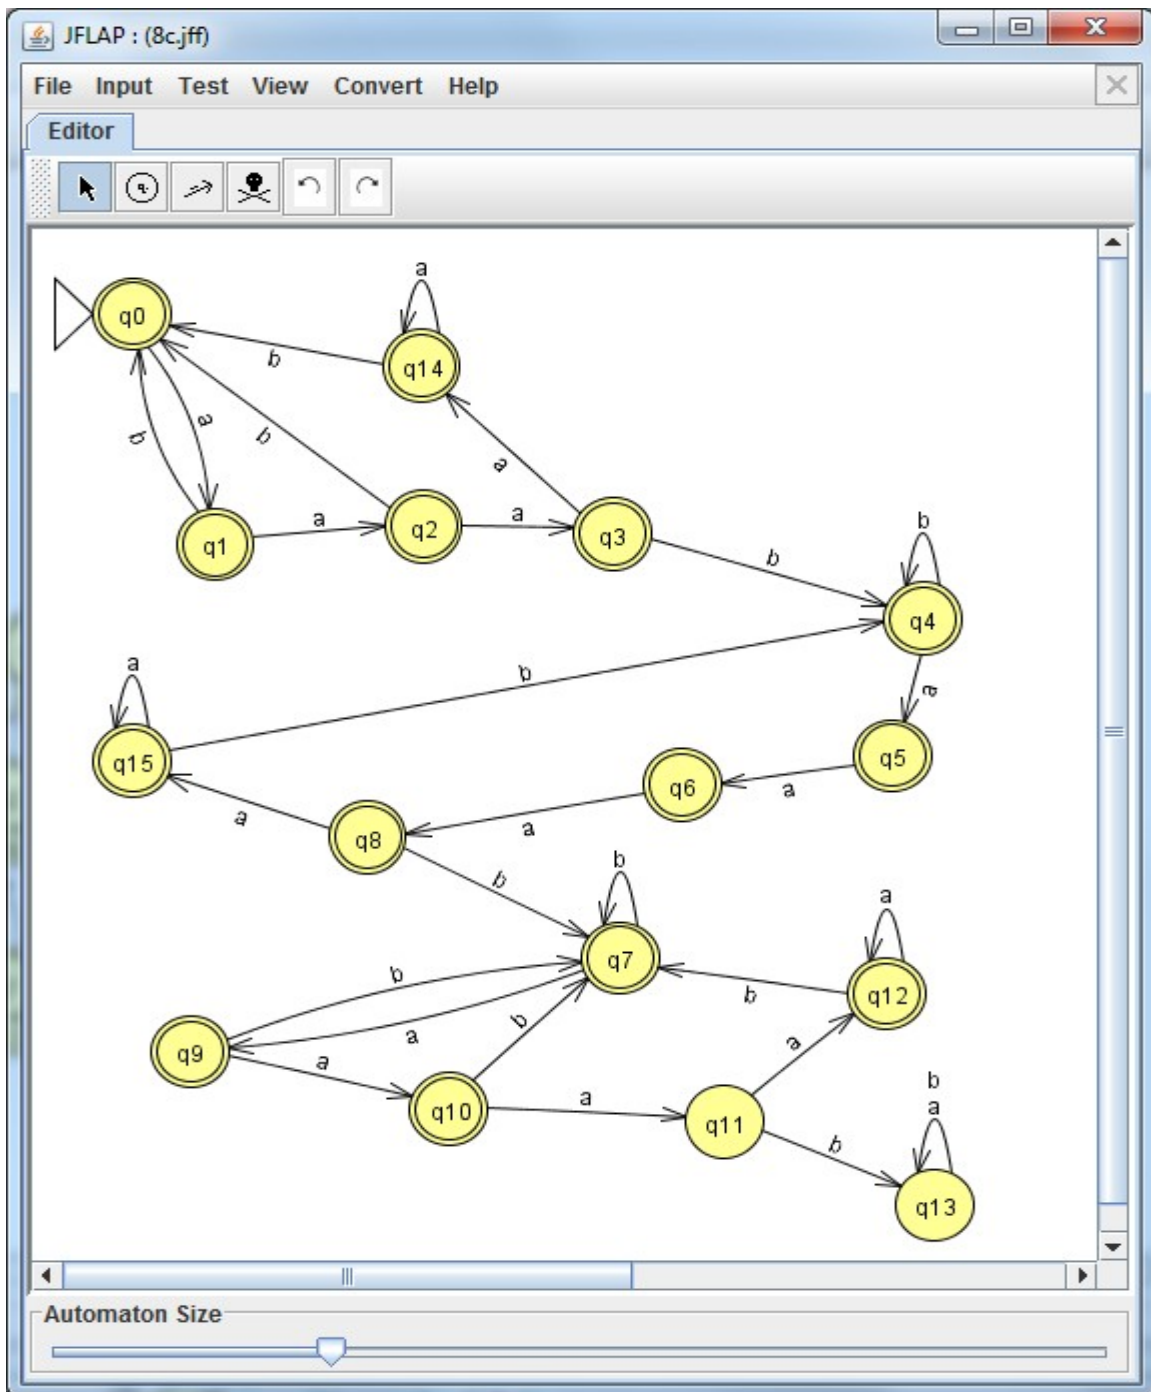

8.(a)  $L = \{w : w \text{ contains no runs of length less than four}\}$

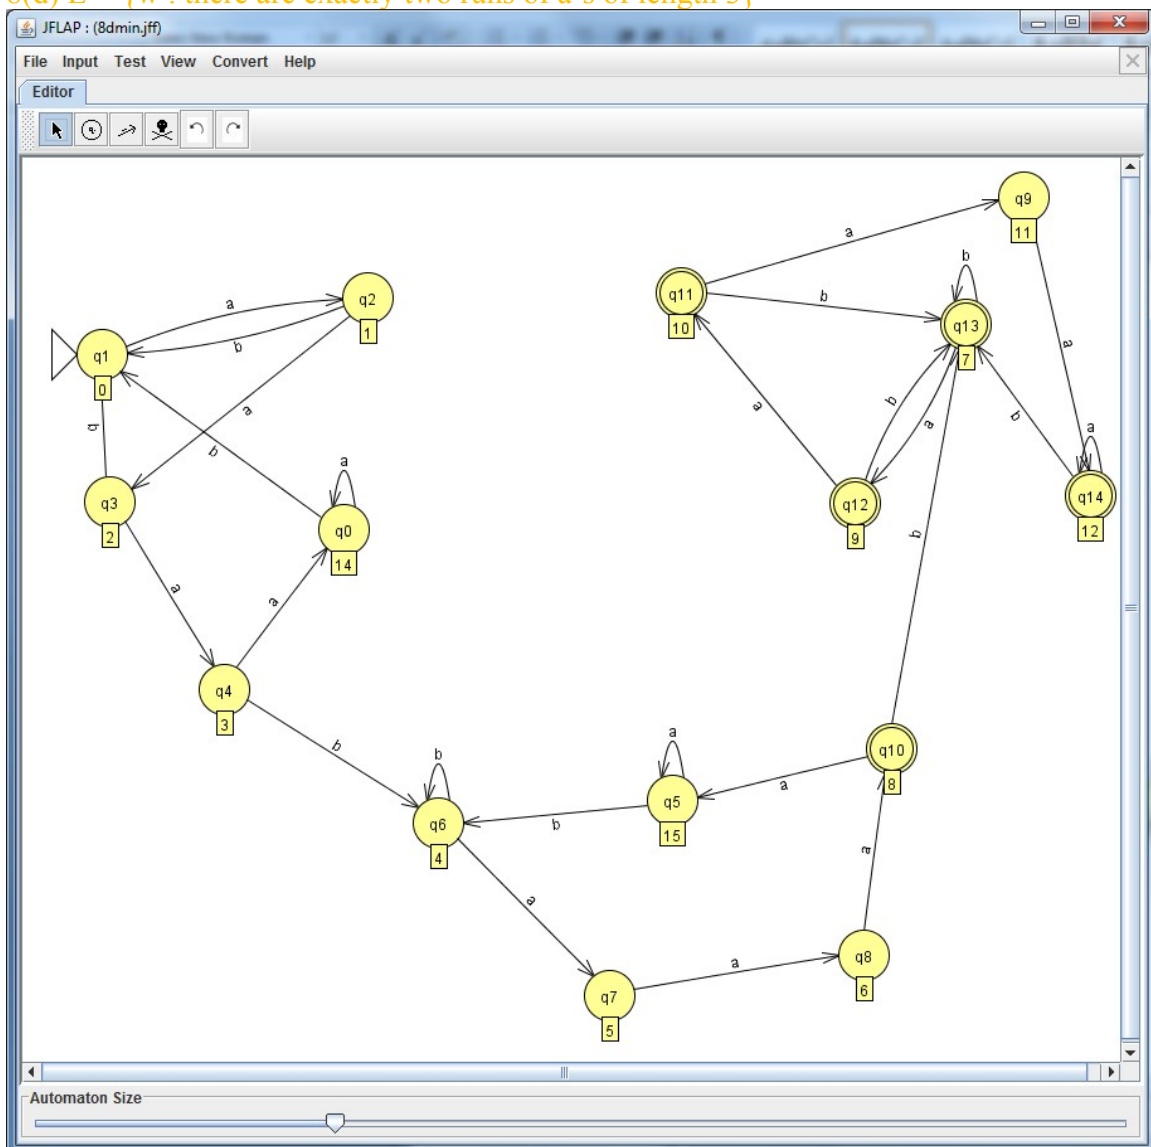

8(b)  $L = \{w : w \text{ every run of } a\text{'s has length either } 2 \text{ or } 3\}$

8.c)  $L = \{w : \text{there are at most two runs of a's of length 3}\}$

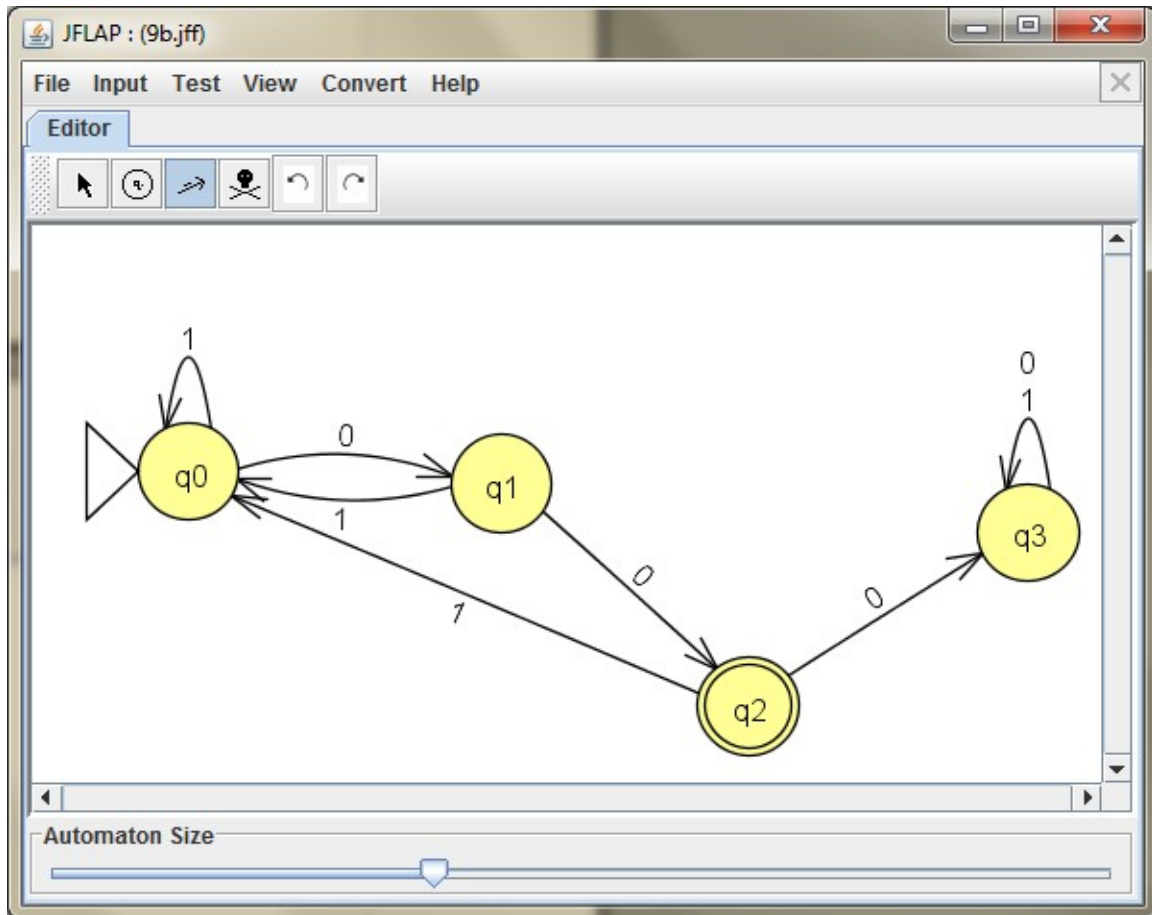

8(d)  $L = \{w : \text{there are exactly two runs of } a\text{'s of length } 3\}$

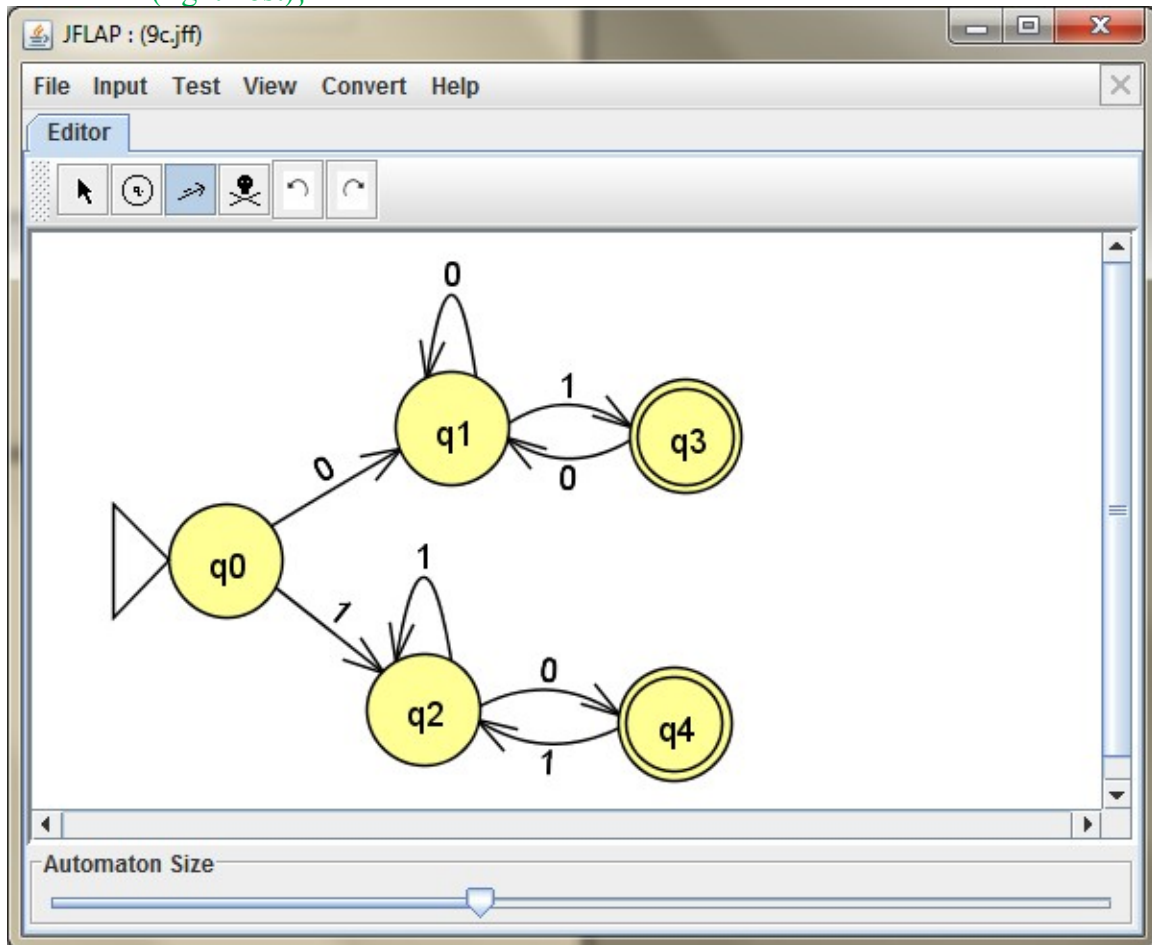

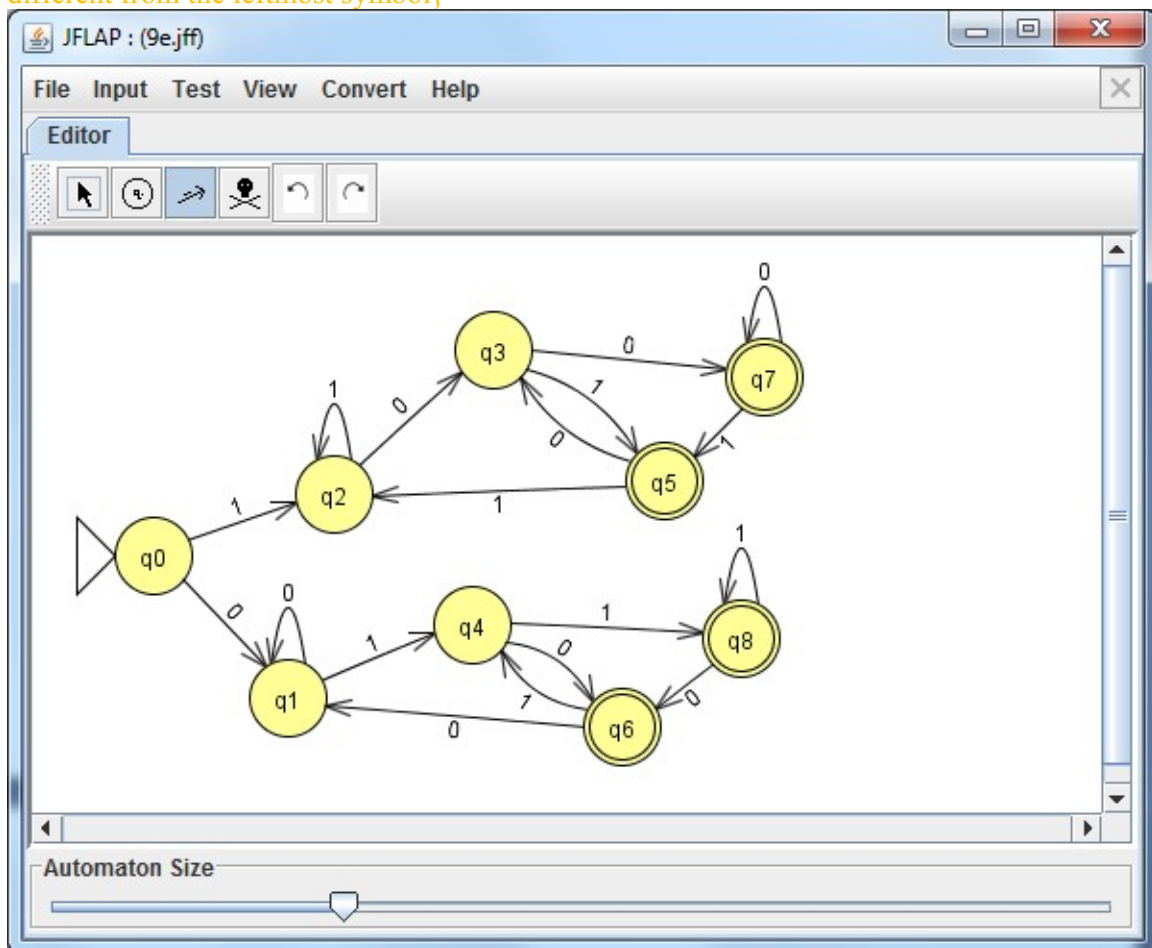

9.(b)  $L = \{ \text{all strings containing } 00 \text{ but not } 000 \}$

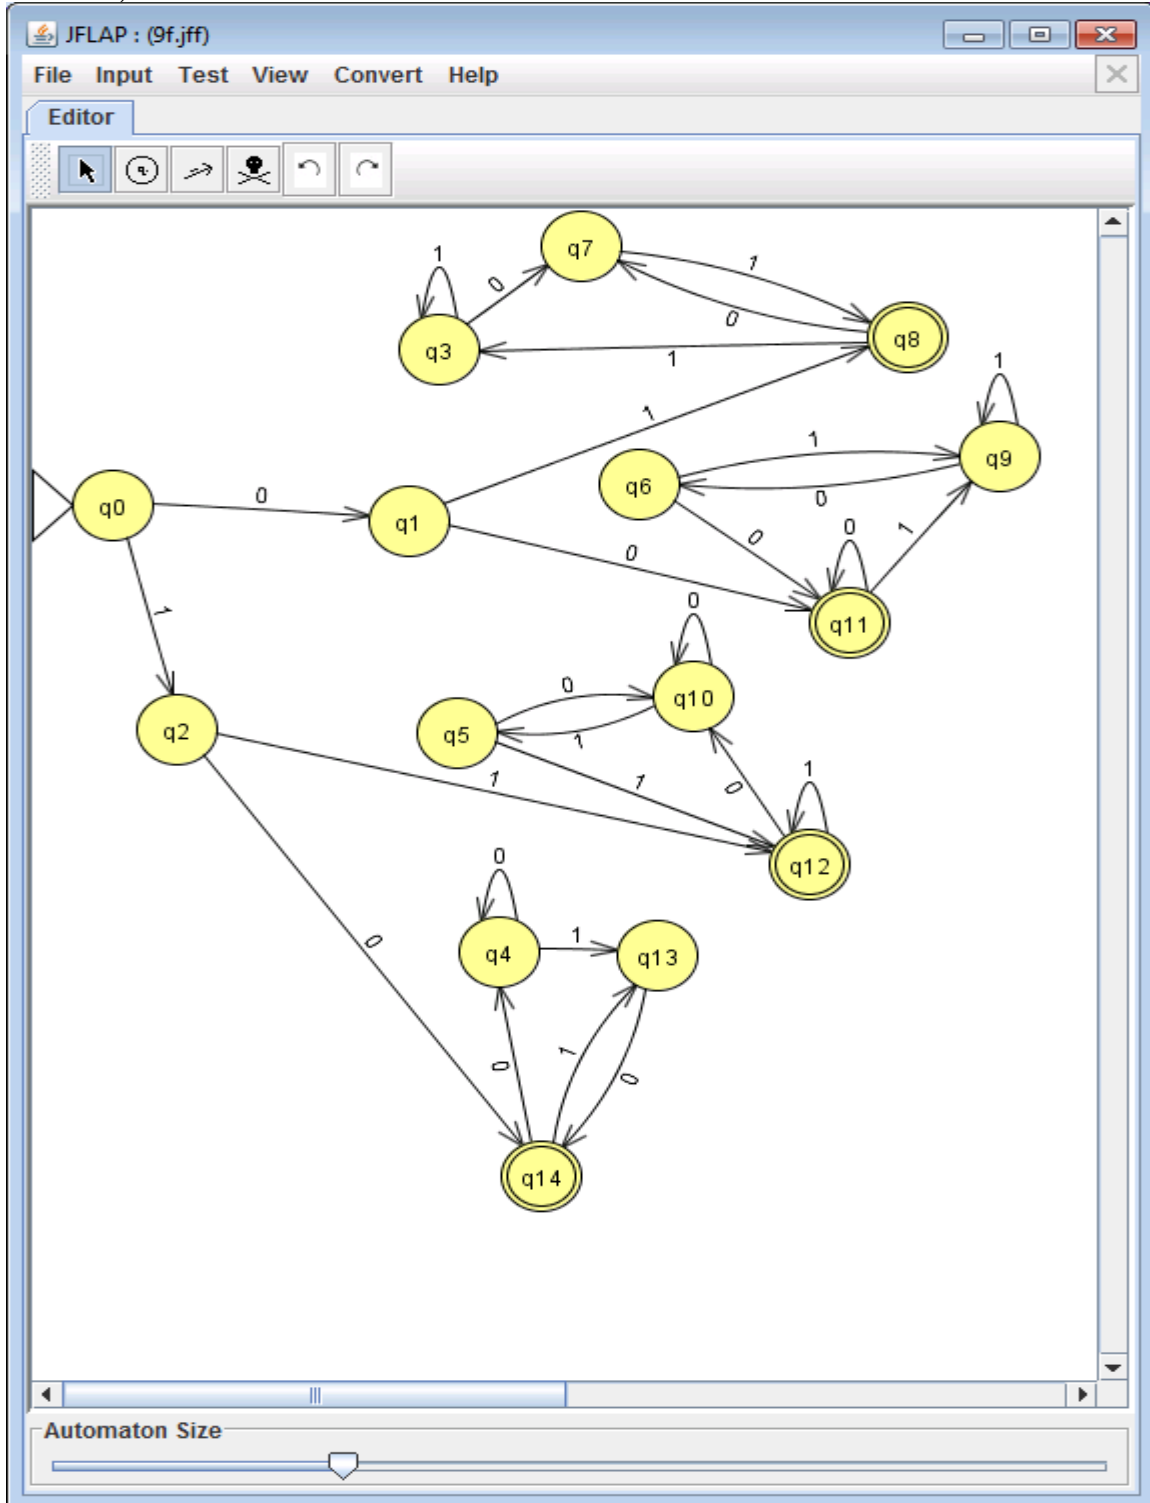

9.c)  $L = \{ \text{all strings in which the first (leftmost) symbol differs from the last (rightmost)} \}$

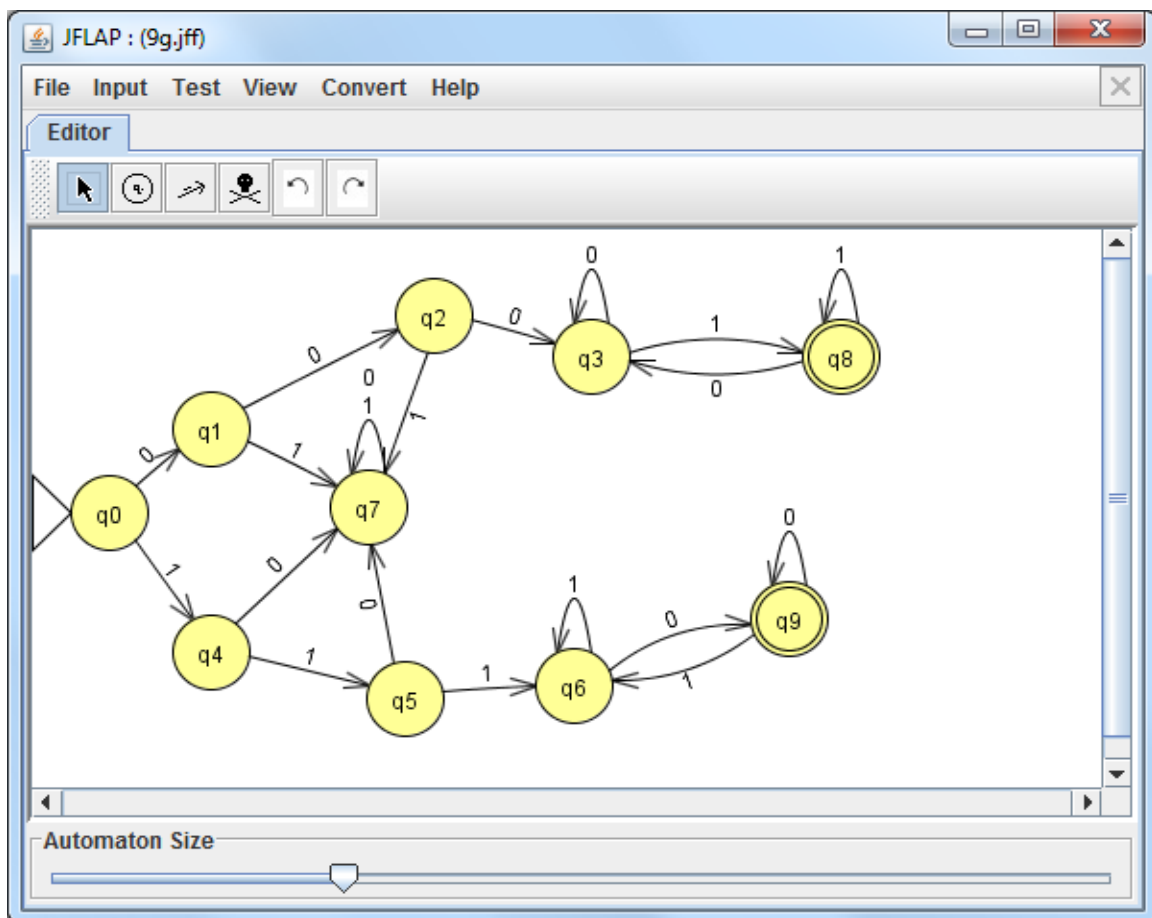

9(e)  $L = \{ \text{all strings of length 3 or more in which the second symbol from the right is different from the leftmost symbol} \}$

9(f)  $L = \{ \text{all strings which the leftmost two symbols and the rightmost two symbols are identical} \}$

9(G)  $L = \{ \text{all strings of length four or greater in which the leftmost three symbols are the same but different from the rightmost symbol} \}$

10. Construct a DFA that accepts strings on  $\{0,1\}$  if and only if the value of the string interpreted as a binary representation of an integer is zero modulo five. For example, 0101 and 1111 (5 and 15) are accepted.
